

# Title: Sequencing the homology arms of yll3a strain around the ade2 gene.

## Date

03062019

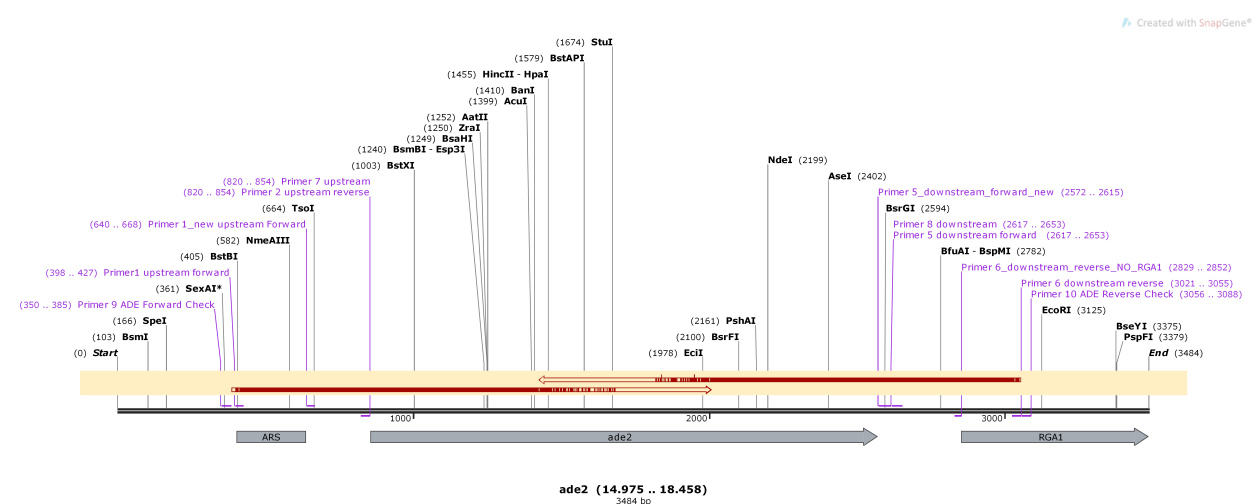

## Objective

See if the sequence around the ade2 gene in yll3a is identical as the sequence we take from SGD of ade2.

## Method

Sequencing from Macrogen

## Results

[Data Local Link](#)

## Conclusion

- The homology arms seem to have 100% alignment with the ade2 gene sequence uploaded to SGD. (:)
- The primers used were not enough to cover the whole gene (:(
